Dear Professor von Uhl:

Hello, my name is Jayvin Hernandez Reyes. My goal is to work as a computer scientist, preferably as a data scientist or in the machine learning industry. Code Bullet, a YouTuber who builds AI to play video games, gave me the idea to go down this road. I watched him a few years ago, which sparked my interest in the subject.

Additionally, I am drawn to computer science because of my passion for solving problems. I have always enjoyed math, particularly for its problem-solving aspect, and I find it to be more appealing than subjects like English where presentation takes importance over the solution. Computer science is perfect because a good idea can be put into action and used to produce results without worrying too much about presentation.

I intend to obtain experience through projects, classes, problem-solving, and developing my writing and computer science skills in order to achieve my goal of becoming a data scientist. I want to have an impact in the future by creating AI that can organize and understand data more effectively, enabling quicker problem-solving abilities.

I appreciate you taking the time to learn about my aspirations in the computer science field. This writing course will not only fulfill my writing requirement, but it will also teach me how to write in a formal and business setting. Furthermore, it will provide me with the opportunity to write in various genres, which will be useful in my future communication with business associates. I hope I can be a key contributor to your class.

Sincerely,

Jayvin Hernandez Reyes
